

# Understanding and Responding to Dementia-Related Behavior

Alzheimer's disease and related dementias can cause a person to act in different and unpredictable ways. Some individuals with Alzheimer's may become anxious or aggressive; other repeat questions or gestures. These types of reactions can lead to misunderstanding, frustration or tension between the person with dementia and the caregiver. This presentation covers possible behavioral changes and ways to respond should they occur.

**Date:** Wednesday, January 18, 2017
